

SmartCraft

CONNECT

Integrate VesselView Functionality with
 Garmin and Raymarine Multi-Function Displays

With the SmartCraft® Connect module, the Mercury VesselView® experience expands to meet the needs and preferences of even more boaters. It transforms Garmin® and Raymarine® multi-function displays into information portals to the boat by delivering VesselView functionality on the same screen as the GPS chartplotter and sonar. The VesselView system delivers more engine performance data and alerts than any other monitoring system in the marine industry. SmartCraft Connect is also Wi-Fi® and Bluetooth® connected for fast and easy updates when new features become available.

VesselView integration for Lowrance® and Simrad® displays is available with the VesselView Link module.
