

Mercury **ELECTRIC STEERING**

Enjoy smooth, quiet performance with the latest Mercury® Electric Steering system. It provides unrivaled handling and enhanced responsiveness for exceptional vessel control, particularly when using Joystick Piloting for Outboards (JPO). Electric Steering also eliminates the need for hydraulics, which frees up space within the boat while allowing for cleaner transom rigging.

COMPATIBLE ENGINES

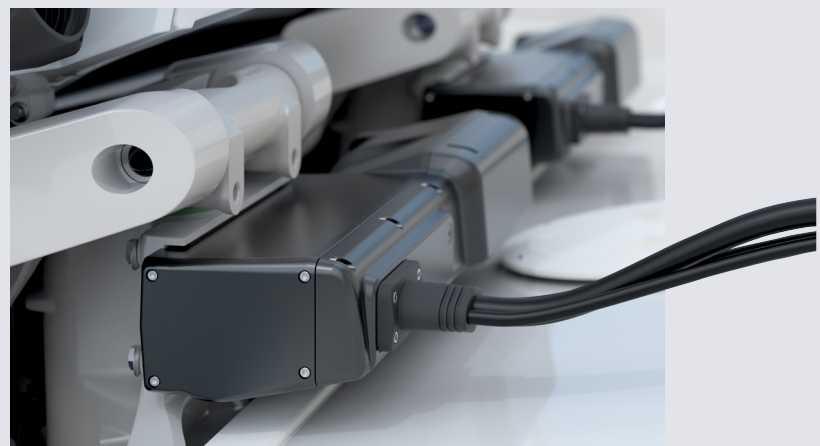

Mercury Electric Steering is compatible with all Mercury V10 and V8 Verado® and SeaPro™ outboards with the Advanced MidSection (AMS), as well as Mercury Racing® 450R and 300R outboards with Racing AMS.

ELECTRIC STEERING ADVANTAGE

- Enhanced steering responsiveness
- Quiet, hydraulic-free operation
- Efficient, power-saving design
- Clean, space-saving transom rigging

50+% REDUCTION IN POWER CONSUMPTION

The Mercury Electric Steering system's advanced power-saving design reduces power consumption by more than 50% compared to the previous electro-hydraulic steering system, leaving more power for running other onboard accessories.

Mercury Electric Steering is available for multi-engine boats with compatible engines and will be available for single-engine boats later this year.
