

## Marine Performance Curves

Basic Engine Model
QSD4.2-270 HO
Engine Configuration
D913003MY03

Curve Number: BC9151, BC9154

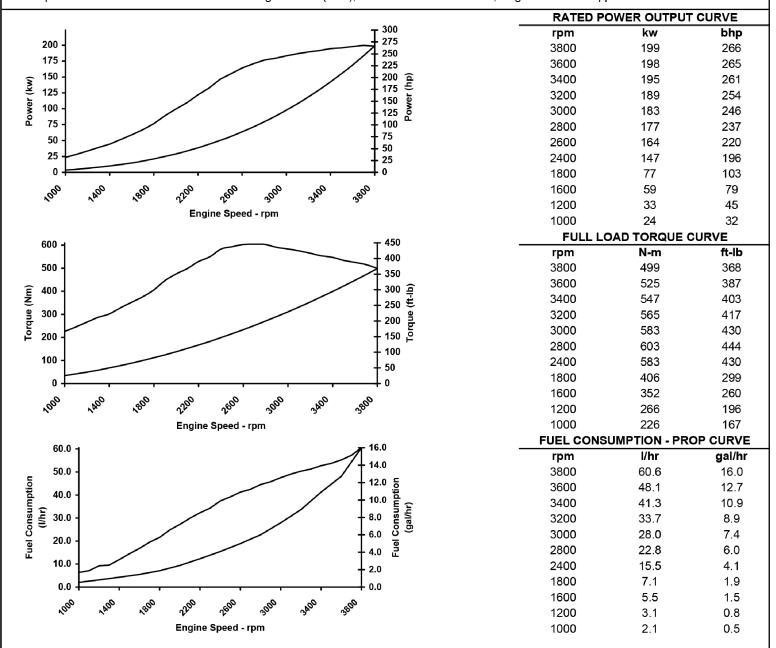

CPL Code: Date: **9-Jul-09** 

Displacement: 4.2 liter [254 in³]
Bore: 94 mm [3.70 in]
Stroke: 100 mm [3.94 in]
Fuel System: Bosch Common Rail (CR

kW [bhp, mhp] @ rpm Advertised Power: **199 [266, 270] @ 3800** 

Fuel System: Bosch Common Rail (CRS 2.0) Aspiration: Turbocharged/Sea Water Aftercooled Cylinders: 6 Rating Type: High Output

CERTIFIED: This marine diesel engine is certified to the model year requirements of EPA Marine Tier 2 per 40 CFR 94 and conforms with the NOx requirements of the International Maritime Organization (IMO), MARPOL 73/78 Annex VI, Regulation 13 as applicable.

Rated Conditions: Ratings are based upon ISO 15550 reference conditions; air pressure of 100 kPa [29.612 in Hg], air temperature 25deg. C [77 deg. F] and 30% relative humidy. Power is in accordance with IMCI procedure. Member NMMA.

Rated Curves (upper) represents rated power at the crankshaft for mature gross engine performance capabilities obtained and corrected in accordance with ISO 15550. Propeller Curve (lower) is based on a typical fixed propeller demand curve using a 2.7 exponent. Propeller Shaft Power is approximately 3% less than rated crankshaft power after typical reverse/reduction gear losses and may vary depending on the type of gear or propulsion system used.

Fuel Consumption is based on fuel of 35 deg. API gravity at 16 deg C [60 deg. F] having LHV of 42,780 kj/kg [18390 Btu/lb] and weighing 838.9 g/liter [7.001 lb/U.S. gal].

High Output (HO) Intended for use in variable load applications where full power is limited to one (1) hour out of every eight (8) hours of operation. Also, reduced power must be at or below 400 rpm of the maximum rated rpm.

CHIEF ENGINEER

TBD= To Be Determined N/A = Not Applicable N.A. = Not Available

- 1 Unless otherwise specified, all data is at rated power conditions and can vary ± 5%.
  2 No rear loads can be applied when the FPTO is fully loaded. Max PTO torque is contingent on torsional analysis results for the specific drive system. Consult installation Direction Booklet for Limitations.
  3 Heat rejection to coolant values are based on 50% water/50% ethylene glycol mix and do NOT include fouling factors. If sourcing your own cooler, a service fouling factor should be applied according to the cooler manufacturer's recommendation.
  4 Consult option notes for flow specifications of optional Cummins seawater pumps, if applicable.
  5 May not be at rated load and speed. Maximum heat rejection may occur at other than rated conditions.

Cooling System¹			
Sea Water Pump Specifications			
Pressure Cap Rating (With Heat Exchanger Option)	kPa [psi]	103 [15]	
Engines without Low Temperature Aftercooling (LTA)			
Sea Water Aftercooled Engine (SWAC)			
Standard Thermostat Operating Range (Start to Open)	°C [°F]	80 [176]	
Standard Thermostat Operating Range (Full Open)	°C [°F]	95 [202]	

TBD= To Be Determined N/A = Not Applicable

- 1 Unless otherwise specified, all data is at rated power conditions and can vary ± 5%.
  2 No rear loads can be applied when the FPTO is fully loaded. Max PTO torque is contingent on torsional analysis results for the specific drive system. Consult Installation Direction Booklet for Limitations.
  3 Heat rejection to coolant values are based on 50% water/50% ethylene glycol mix and do NOT include fouling factors. If sourcing your own cooler, a service fouling factor should be applied according to the cooler manufacturer's recommendation.
  4 Consult option notes for flow specifications of optional Cummins seawater pumps, if applicable.
  5 May not be at rated load and speed. Maximum heat rejection may occur at other than rated conditions.
