

SmartCraft

CONNECT

**Integrate VesselView Functionality with
Garmin and Raymarine Multi-Function Displays**

The Mercury SmartCraft® Connect module transforms Garmin® and Raymarine® displays into information portals to your boat by delivering VesselView® functionality on the same screen as your GPS chartplotter and sonar. The VesselView system provides more engine performance data and alerts than any other monitoring system in the marine industry. Using the convenient SmartCraft Manager mobile app, you can perform over-the-air software updates, ensuring you always have the latest tools available on the water.

VesselView integration for Lowrance® and Simrad® displays is available with the VesselView Link module.
